Life Science Research Markets and Analyses: Western Europe Countries – ABA 374.3A
Huckle D,

Adams Business Associates: Global Library of World, National and Regional in depth Information and Market Analyses – 3rd Edition. 2nd Impression (387 pages).
Price: GB £ 2,750 (for Multi-client use).

**New individual country reports from the Western Europe report:
each at GB £ 800 (for Multi-client use).**

- **ABA 374.3B – United Kingdom with Ireland – 165 pages.**
- **ABA 374.3G – Germany with Austria – 139 pages.**

Target audience: Chief executives, marketing and sales managers, business development managers, investors and analysts.

Like the whole Western Europe report these individual country reports are part of the ABA Global Library of Life Science analyses which covers over 120 countries in eight (8) regional analyses. These reports have full market data up to 2017 as the base line with projections to 2022, and relevant events, funding and activity in 2018 up to the date of providing purchasers with their copy.

These individual country reports cover the Reagents and Equipment Markets within each country as with the whole Western European Life Science and Biotechnology report.

The primary objective of the report is to provide the detail of the Life Science and Biotechnology sector by profiling each country by the development of its Political, Demographic, Government & Private Funding, Technology Status, Biotechnology Business Structure and Life Science Research Activities.

The important overall European influences are also given to ensure that these markets are seen in the whole European context. Commercial development and Funding systems are pitted against the focus of Life Science research, emerging and established products, technologies and companies.

Research Market Quantification is discussed with segment distribution, products and commercial activity. The focus of the detailed research groups and companies adds to the available information plus the impact of BioClusters in each country.

These reports provide a unique analysis of the Life Science/Biotechnology sector in each country and the future technology and focus area trends that will impact the market in each country.
